CCR #	Initiator	Installation	Initiation Date	Status	Status Date	Priority	Type	Size	Expected Release	Expected Release Date
Title	Description		Recommended Action							
20040025	Shamp, Cheryl	KSC	10/6/2004	New	10/6/2004	Medium	None	None		
Organization and Physical Organization field for new accounts	When requesting a new account for a contractor, the contractor employee has to select a NASA Organization. This field should at least offer a other, since they are not assigned NASA mailcodes. This has been a problem since I pull reports and several contractors show up in the Center Directors organization mail code.		Offer the option of " Other" so that contractors can choose this instead of entering incorrect data.							
20040024	Worley, Stephen F	MSFC	9/1/2004	Approved	9/1/2004	Medium	DR	None	2.1	10/18/2004
Problems in Admin/Rpts	The Module Report, User Report and Find/Manage Users need work: 1. Module Rpt - add course numbers, pop-up, add location to email, 2. User Rpt - display failing scores 3. Find/Manage Users - Grant Access buttons not displaying.		1. Module Rpt - include all course numbers and resize pop-up, add location to rpt when emailing. 2. User Rpt - fix rpt to display test scores (pass or fail) 3. Find/Manage Users - allow a blank TA type so buttons will display.

20040021	Garrett-McCants, Ber	MSFC	8/11/2004	Approved	8/11/2004	High	None	None	2.1	10/18/2004
Database Changes of data type longdata to varchar2.		<p>The Longdata table contains a field call 'text' that is currently an Oracle longdata type; this makes it impossible to migrate the database to current versions of Oracle automatically. This data type also limits the ability to perform routine SQL commands. This table stores data that relate to a number of entities two of which are; sme_question and messages. Further code analysis will be required to determine the additional entities supported by longdata. After analysis route must be written to convert the current data and data constraints added to support the currently support entities in the future.</p>								
20040020	Moore, Phil	MSFC	7/27/2004	New	7/27/2004	Medium	DR	None		
Admin reports do not run correctly on a Mac with Internet Explorer browser.		<p>Ames Admin was unable to run his usual report since the last release of SOLAR using Internet Explorer on a Mac. He was able to run reports as usual using Netscape. This was verified by a SOLAR programmer.</p>

New Reporting Capability		Other than receiving the paper copies of course completion certificates, supervisors have no way of know that employee's have completed mandatory training.				<p>In place of eMailing course completion certificates to supervisors, make the SOLAR reports accessible to non-Administrative users.</p> <p>It was agreed at the March 30, 2004 CCB that the CCR would be defined and implemented as follows:</p> <ol style="list-style-type: none"> 1. Place an administrative POC list link on the SOLAR home page. The list would include the current SOLAR administrators for each center and discipline. The list would include person's name, phone, e-mail, org code, and discipline, where it applies. 2. Include a note for supervisors saying something to the effect "If you're a supervisor, and would like to obtain a report, contact the admin person listed for your center, discipline or org code " 3. Include a note for end-users to direct them to the user account section on SOLAR where they may view their course completion and print certificates. 4. To keep the list current, include a note to contact SOLAR Support, who will act as the clearinghouse for adding/deleting administrative privileges. 5. Publicize the POC list after verifying accuracy of individuals listed. 				
20040011	Mangold, Scott	ARC	3/17/2004	Closed	5/3/2004	None	RC	None		
Add courses to ARC Training Center		Two courses that are currently listed under the Occupational Health Discipline need to be copied (added) to the list of courses under ARC Training Center. The courses are: Bloodborn Pathogens (OCC-001-01) and Hearing Conservation (OCC-002-01). Steve Rowell emailed Ruth Mariner on 3/16/04 and she approved the change. reference TT TT0000459694

home page confusing	On the SOLAR home page you have a title: Mandatory Courses. Underneath the title, you list centers with certain training that is required. When you click on the link for a certain center, not all the required training is listed. So, one could think that they wouldn't need to take any other training than what is listed under mandatory. I suggest changing the links under the mandatory training title linking to each center. Within each center link have all the required training for that center, which would include Basic IT security for year (20xx) I understand that all IT departments inform their employees that they need to take more than what is listed. However, I think it would make their task much easier by not confusing the employee when they enter SOLAR's home page.		Redesign mandatory training area of home page.							
20040007	Brinkley, Robert L	DFRC	2/25/2004	Withdrawn	4/7/2004	High	RC	Medium		
User ID/Login changed to DFRC unique ID	Ability to identify users by name that is inconsistent with other center databases for reporting at an Agency level. This requires a substantial amount of manual effort and is prone to errors.		Please change all DFRC user IDs to Center unique ID in order to efficiently respond to Agency reporting requirements. Dryden will provide a data table with current username and corresponding unique ID in whatever format is required.

Modification of SOLAR module management screen	Additional field of information is now require in solar for the astar test data interface and modification of the module management screens is need so the TA's can enter this information for new and old module on SOLAR.		Modification of the module management screens is need so the TA's can enter this information for new and old module on SOLAR.							
20030060	Morris, Gretchen A	GRC	10/28/2003	Closed	1/5/2004	Medium	DR	None		
report page resets (for Karen Langenwalter)	The report page now resets every time you come to it, it didn't used to do this. It used to keep the last set of parameters entered as long as you were in the reporting area.		Fix this to work the way it used to. What happens is, when you set all of the parameters and run a report and then press the back button from the report, all of the parameters are reset and need to be set again. Why was this changed? it gives the TA's more work to do when they try to run specific dates, and centers...etc.

Read Access to SOLAR ITS	I would like approval for read only access from Security Center to the SOLAR IT Security training records. Security Center s an Oracle database application at MSFC. Security Center is used to compare training requirements with who has taken what which is obtained from SOLAR. During FY03, on a weekly and then a daily basis, I manually went into SOLAR, generated a report, reformatted it, and then loaded it into Security Center. A real time read only view will allow us to make this process much more efficient. Thanks.

LaRC Purchase Card Refresher Training- Request to modify the reporting tool to list the students last name and first name (in that order) in the spreadsheet		We are very pleased with the SOLAR training developed for us earlier this year. However, we are having difficulty using the report on completed courses/tests data because the Module Report lists the SOLAR ID name first for the students that have completed the module. We must match this report to several other reports related to the Purchase Card program using the students last name. Thus having a spreadsheet that can be sorted by last name is essential.				Please modify the Module Report for the LaRC Purchase Card Refresher course by creating a separate column on the spreadsheet for last and first names of the student. My objective is to be able to manipulate the spreadsheet to sort last names in alphabet order. Thanks.

Common Identifier Information for User End Databases		In order to provide management with a variety of metrics for module completion/non-completion rates by Employee/Code/Division, there needs to be an easier way to cross-reference an employees status. Currently no common unique identifier for cross referencing the SOLAR Employee Number with a Center's Unique Employee Identifier exists except first and last names. Due to possible last name duplicates and the fluid matrixing of employees throughout the Divisions, the currently provide information is not sufficient for training coordinators to gather quick and reliable metrics for tracking purposes.				Include in all of the Training Administrator Report Templates (or where appropriate) a column which includes the last four digits of an employees SSN. Since SOLAR now requires this informaiton to initiate an account, it is readily available to use in the generation of these reports.

Report from SOLAR by Center for the Specific Civil Servants who have not completed the required IT Security training.	All center IT Security Managers must report each year the metric of the number of people who have completed therequired IT Security training course. This year the agencies goal is 100 o f all Managers and Civil Servants completing this course. To the best of my knowledge, the only reports that the centers are receiving are who has completed the required training. This information is very valuable, however, there is a great deal of cross checking with our lists of people on board to determine who has not taken the required training. In addition many of our civil servants and contractors are registering themselves incorrectly (as part of a different organization, etc.).		To remedy this situation and to make better use of our limited resources, I propose that an additional report be generated listing only the civil servants by center who have not completed the required training. This list can then be analyzed to focus on those individuals who clearly have not met the training requirement or thoes individuals who may no longer be active at the centers. As IT Security Manger for JSC I understand that the SOLAR lists may not have the complete listing of civil servant personnel, but this report will go a long way toward completing may analysis.

Metrics	The following metrics will be needed to build a business case for the use of SOLAR by user, by discipline, by course, and by center. We will also use this information to track new COTS courses. 1. Number of registered users. Note: User account metrics currently obtained meets this need. Frequency: Monthly 2. Course Utilization-This metric includes a. the name of the course b. the number of times the course was accessed c. the total number of courses accessed and c. the number of users that accessed the course. Note: this metric is for access, not completion. Frequency: Monthly.

Database Redesign	The current design of the SOLAR database is not efficient and causes excessive work and effort to update during common activities such as adding courses or disciplines to SOLAR. Additionally, many coding efforts are also impacted by the inefficiencies of the current design that forces creation of multiple DB users to access the data via the applications. The current design has a unique set of tables for each discipline. This means redundancies and inefficiencies in the database.		Create a Normalized Database and eliminate redundant tables and unnecessary fields and DB user agents.

The Certificate of Completion should print on the certificate: Hazard Communication - Basic Level (if the user took Basic Test) or Hazard Communication - Comprehensive Level (if the user took Comprehensive Test)								
20030020	Carlson, Terry	MSFC	3/19/2003	Closed	9/16/2003	Medium	RC	None	1.6.1	
SME Test Question Module Logic		It is currently possible for a SME to mark questions for deletion in their module of responsibility. This is a valid capability except they can mark enough questions so that they no longer have enough to generate a valid test based on the minimum number of questions that has been identified for this module. For example if a module has a requirement for 20 questions for a Basic Test and 30 for a Comprehensive and there is a pool of 35 questions, the SME can mark 6 questions for deletion and SOLAR cannot generate a valid Comprehensive test.				Warn the SME of the impending discrepancy when they select a test question for deletion. Give them the option to lower the count for the required number of questions or put them back to the question they have marked for deletion if they choose not to lower the question count.

News Item Entries - convert from hard code to dynamic	SOLAR could benefit from a news-entry system which would allow SOLAR news items to be stored in the database, and the news area of SOLAR to pull it's items from the database. Currently, the news area is hard-coded into the HTML. Updating or changing news items requires editing of the actual HTML page.		Create database tables and entry form pages for users to submit a news item, it get reviewed and approved by SOLAR Admins, then the news area can populate from the database of approved news items.							
20030004	Bell, Ellen L	MSFC	1/16/2003	Closed	9/19/2003	High	RC	None		
Forgot Password Module improvements	By far, the largest area of user difficulty, resulting in Support Desk interaction, is the "Forgot Password" process. The current form of user-identification is primarily via email address matching. With the new "OneNASA" email convention, the number of manual password resets has grown significantly. This situation results in time spent by first and second line support personnel manually intervening to validate the password reset request. It also causes a negative experience for the user, including delay in completing SOLAR training.		Redesign the "Forgot Password" utility to be more user-friendly and allow users more interaction which would allow them to reset their password without Support Desk intervention. This could include providing a "hint" method to assist users in self-validating their identity, and providing, or resetting their password immediately.

Questions to the SME doesn't work correctly	I try to answer, type in my answer and select ok and it puts the original question in as my answer.		Please fix it so that I can answer the questions. In the mean time, please fix the answer to John Tapps question to read "John, though you cannot lock yourself out by deleting or disabling the administrative accounts as the Microsoft statement qualifies, you could lock yourself out by removing the Administrators group (and other relevant accounts) from the log on locally user rights in the Local Security Policy."							
Thanks!

Error in printed results from IT Security Module report for a specific module (e.g. UNIX or NT).	I am an administrator on the IT Security SOLAR system responsible for generating reports, etc. This error was discovered when I printed a complete listing for trainees who successfully completed one of the ITS modules. The date range used was 1-1-00 through 1-8-03. When comparing the results of the printout with our internal database, several dates were in conflict. This was true for all module listings. Upon careful examination of the data it seems that the completion dates are stored in the following format: DD-MMM-YY The print program apparently sorts the date field in the above format such that a trainee may have completed three successful tests on three separate dates with the following stored results. The following came from a single user report for a specific ITS module: 01-APR-02, 23-OCT-00, 26-SEP-01 The date that is reported on the module printout is the date with the highest DAY value, regardless of the year in which the test was successfully completed. Thus, for this individual, the report states that the last successful completion was Sept 26, 2001 instead of April 1, 2002. This is very serious for the user community because the system administratorz must have completed certain courses within a three year period. The training offices will be running the module reports to identify who should be trained (again) and in many cases will be getting erroneous results. I will be happy to discuss this with someone if this is not clear.		Please make the required changes to the print program for all modules to ensure that this error does not occur on any of the reports. This is impacting us NOW and should be relatively easy to correct. I would be happy to help test the new programs if you want outside assistance.

Password Expiration Notice Email to Users		A large number of SOLAR Support activity involves assisting users in resetting passwords due to the 90 day expiration guidelines. Many users only visit SOLAR once a year for mandatory IT Security training. When they return, their password has expired. This causes confusion and a negative experience for the user. It also causes increased work load on Help Desk and Support personnel to work with users to change and reset passwords.				My recommendation is that a short period of time (2 weeks ?) prior to their password expiring, the user be sent an email notifying them of the expiration and reminding them of the policy. In addition to the reminder about the password, SOLAR could also use the communication to announce new features, courses, etc. that would encourage users to come to the site more than just to take the once-a-year mandatory training. Another advantage is that by reminding them of the SOLAR site, it would also remind them that they need to take the mandatory training and may spread out usage on the site more evenly. (i.e. users wouldn't wait until the last minute)

<p>Top Frame on SOLAR homepage difficult to view for small monitors, Netscape users and/or display set for less "view area".</p>		<p>The SOLAR homepage is not designed for all users. If a Netscape user has a smaller monitor or has the display set for a less viewing area, the entire Top Frame is not viewable. When the width parameter is defined differently and the webpage is larger than the viewing area, Netscape will provide a "scroll bar" for navigating to the area not viewable. In this case, the "Forgot Password" button is not accessible. This could cause a lot of problems when the users start using SOLAR for their required IT Security Training. IE seems to function correctly.</p>				<p>To correct this, the width can be set to a percentage of the viewing area and the web browser software will adjust and when needed provide a scroll bar for the user to use for navigation. Change the Table parameter width="790" to width="100" Where the 100 is the percentage of the viewable area. This will keep the user from having to change the display resolution to be able to display the web page correctly.</p>

PROGRESS REPORTS WITH REQUESTER DEFINED GROUPS	Specifically with regard to IT Security Training, progress reports are required for all NASA employees and also for all Contractor employees that use SOLAR for their IT Security Training. Agency up-and-out reporting is annually. Center up-and-out reporting is quarterly. Center down-and-in reporting varies from monthly to weekly as deadlines approach. Employee data in SOLAR is non authoritative. It is supplied by the employee. It is often incorrect. Organizational data is often stale. Current SOLAR reports are based upon SOLAR employee data. As such considerable manual effort is required to resolve and track discrepancies, to identify employees still requiring training, and to generate summary progress.		Provide a new capability for progress reports combined with requester defined groups. This addresses (and partially automates) all of the above issues. The requester can define groups using authoritative data from NPPS or from a Contractor personnel system. SOLAR can generate a progress report containing requester supplied employee data combined with SOLAR training data.		The simplified report format would have employee name, SOLAR user id, employee data (TBS), completion date, and summary progress. The report sort key should be requester specified, such as employee name, or employee organization code /employee name. These two sorts support up-and-out reporting and down-and-in reporting respectively. This Change Request assumes that the requester maintains a database of employee versus SOLAR User ID external to SOLAR. Maintaining a database of employee groups internal to SOLAR is a consideration. I have provided three Excel workbooks that layout in detail how to generate progress reports without any changes to SOLAR using existing SOLAR report capability. These are an excellent reference for understanding this Change Request.

Cannot edit Basic, Single answer test questions for this Module (Windows 2000 Security)			Within the IT Security discipline, Training administrator section, I have tried to edit Basic (Single Answer) test questions for our Windows 2000 Security module and continually receive a Database error -1001. I can edit any other type of questions for basic (except for all) and can edit any of the comprehensive questions. I could/can edit all questions (including Basic, single answer) on the review site and can edit any other questions from any of our other modules.			Find out why I get this error, and correct it so that I can edit the test questions online.				
20020092	Morris, Gretchen A	GRC	9/23/2002	Approved	1/30/2003	Medium	RC	None		
Appropriate Feedback from Courses			Currently a SOLAR survey is presented, once a student passes a test and is offered a certificate to print. The results of that survey is sent to SOLAR and (I believe it has been explained to me that) is put with all other comments in one long generic file with no way of telling which course it came from. Also, because of this fact, the SME for the course hardly ever sees any information that may be collected from this tool.			Possibly have two surveys, one for SOLAR functionality and service and one specific to course content and presentation. (Could attach the course survey to the "Questions for SME" button and rename the button to something more appropriate.) Ensure that the course survey results include the name of the course they are for and that they are sent to the course SME.

Missing Organization Code: LaRC - RAE		Proper logging of training completed requires correct identification of NASA employee organization. My organization, the Multidisciplinary Optimization Branch in the Aerospace Systems, Concepts and Analysis Competency at the Langley Research Center, is missing from the drop-down menu on the Identification and Contact Information page (both for initial request and Change User Information). There is no alternate way to enter the Organization Code. Therefore, I cannot be correctly identified as completing required training, even though I have done so.				Add the Organization Code "LaRC - RAE" to the drop-down menu on the Identification and Contact Information page.

Center and discipline level TA's have the same access rights. As the ARC SOLAR training administrator, I need to have global access to all users information to verify IT Security training progress. Same as CCR20020056.		I am not able to see user information or generate a specific user training report for other TA's of other disciplines. It gives me an error and tells me that I don't have access to this TA's information. This is not acceptable since I am responsible for reporting to Center management on the metric program at Ames for all civil servants. I need to do database queries for users from other centers. Periodically, users will show up on ARC's SOLAR reports and they cannot be found in the ARC x500 database. I then need to do a global query to see what center the user belongs to. I then send a system email message to that user explaining they are showing up on the wrong report and that they need to go back into SOLAR and correct their user information.				Center TA's need to agency-wide access to all civil servants information				
20020042	Grant, J. Greg	JSC	4/15/2002	Closed	5/8/2002	High	RC	None

20010094	Wilson, June	MSFC	11/7/2001	Closed	1/13/2003	None	RC	Medium	1.5	9/30/2002
Undeliverable email messages			When the user's email is incorrect in the database, and the user has requested a password change (and thus, a message to be sent to them), we (agency training administrators) do not get the undeliverable messages. These are the automated email messages by pdisys or pdiproc.				Capture undeliverable email messages from the SOLAR UNIX server.This would allow ATAs to immediately know when a message is undeliverable and avoid the user saying that they had made a password request and never heard back from us.

20010093	Kolar, Charissa	ARC	11/7/2001	Closed	3/12/2002	None	RC	Small		
Registration choices			In the registration process the user has to choose a primary and secondary related mission/work area. Listed as options are all the science areas, public affairs, human resources and training, but not our group. We work in the Commercial Technology Office or Tech Transfer office. There is one in every NASA center and staff at HQ that work in this area, but we don't really fit under any of the titles you have on the pull down menu.				I would like to make the suggestion that this area is added to the registration portion of the database.			
20010092	Lindhorst, Douglas	KSC	11/7/2001	Closed	3/12/2002	None	RC	Small		
Primary/Secondary Discipline Choices			The choices that were offered for primary and secondary disciplines during the user info did not give the choice of systems engineer. Why not? I would think that the majority of those taking this training would be systems engineers.

NASA NMO Location/Organization JPL		<p>Please note that in the LOCATION block that must be completed in order to get a password, there is no location option for the NASA employees at the NASA Management Office (NMO). While we are a component of HQ, we are located at JPL. This has resulted in confusion for the NASA employees at NMO. Put on hold; Dr. Lopez action item to get more info.</p> <p>Currently, I have employees that register under HQ, JPL, and Other. This in turn makes it more difficult for me keep track of training accomplishments since I have to look unde three locations headings. NMO is a NASA location and we would appreciate having it so indicated on the registration form.</p>		<p>Determine how NMO should be listed in SOLAR and make necessary changes.</p> <p>Should location be JPL, with organization code of NMO?</p>
